

:: Why Vastech

We have used our years of personal experience, professional experience and talents to become a premier professional web solutions firm specializing in both small to large web-based projects.

We have kept pace with technology; we have hired and trained the right people, with the necessary skills in all areas of business, marketing, technology, information architecture and graphic design. Our people are multi skilled and cross-disciplined, providing a more customer-focused product for our clients.

Vastech provides domain expertise and solution frameworks for the industry segments spanning Private Sector and Public Sector.

The Vastech advantage is supported by a broad range of information technology services, industry specific knowledge and experience, proven processes, and highly skilled IT professionals.

All these details are, of course, incidental. What you really need to know about our company is that we can help your business to grow and that we can help you to best serve your audience.

:: Excellence

Through high quality products and services.

:: Reliability

By providing our customers with IT solutions that meet their needs and cope for future expansion by utilizing our wide experience.

Internet Solutions

We provide advanced Internet solutions in different aspects including e-Commerce, e-Business, content management, business process management, in addition to website development services.

We build websites that return control to you. Once we've built your site, we don't expect you to come back to us every time you want to update it. We don't try and tie you into long-term contracts and we don't expect you to pay us to complete work that could be easily handled by your own skilled staff.

Our Content Management software empowers you to add, delete or edit any area of your site. We understand that your market moves quickly and that to maintain your competitive advantage your site will need to remain up-to-date at all times. To support your business we provide software that allows any and all of your staff to update your site and add new content, as your audience demands it.

The site will allow unlimited growth at no further expense as you can have as many pages of information as you want with the facility to add new pages whenever you need them. There is no requirement to specify in advance what pages you require as the navigation system is updated automatically as new pages are added.

What are the advantages of a CMS?

- Cost saving – you won't need programmers or a web design agency to change the content of your website.
- No additional costs – you won't have to buy any additional software to manage the content of your website.
- Just in time content – you can change the information of your website whenever you need. No more delays.
- Time saving – all content changes can be made by the person who is responsible for this information. No more explanations to other people - No misunderstandings.
- Content quality improvement – those responsible for areas concerned to their particular job can be responsible for updating that section of the site.
- Happy clients – they can find all important information in your website at any time.
- Easy to use – you can correct the content of your website with a few clicks of the mouse.
- Reaction time to the market intelligence – it is only a matter of minutes.

Custom Software Solutions

Our experienced system analysts and programmers work on your project from its conceptualization through and beyond its completion and implementation. We will manage the project engagement to ensure that the project remains on its intended course and within budget. It's easy to offer deployable systems and install them, but we will remain with you to insure that your technical personnel and other employees can successfully use the application. We also offer customized support contracts to meet most any need.

Enter the world of web applications! Ranging in scope from supply chain and customer relationship management to human resource management, this new breed of web-based systems can be accessed from any Internet browser on any platform.

What our application can do for you:

- Reduce infrastructure costs.
- Eliminate travel expenses.
- Improve time to market.
- Provide you with reliable and secure communications.
- Flexibility of operations.

Our Services in these areas are focused on :

■ **Application Development**

This includes web based, client/server application development and enhancements to legacy applications .

■ **Migration and Customization**

This includes: version upgrade services, database migration, re-engineering, functionality upgrades and porting .

■ **Collaboration**

Our technical staff can work within the parameters of a larger project to assist your staff or other outside consultants; be it maintenance programming or specific development .

■ **Specialization**

As a staff, we specialize in a wide range of programming languages (.Net,Java, JavaScript, JSP, C/C++, PHP ...) and open source software.

■ **Tools**

The technical staff prides itself on a solid knowledgebase of open source options with new tools being researched on an ongoing basis .

Development Environment

For the highest quality end product, the development environment and production environment should be the same. Beyond the benefits listed in OS Environment, Linux also has great flexibility, which ensures quicker development.

Portals Design and Development

By aiding your business by moving the custom applications that you use today into a single, more universal, and easily accessible interface.

Web Design is our specialty. Portal Design can create an effective Website that satisfies users and meets your organization's business goals and objectives. We understand that information design and usability must drive Web design and the online user experience. We also understand that, to create an effective Web site for your company, we need to build it in cooperation with your company and with feedback from the end users that will be the target market of your company.

Multimedia Design

Macromedia Flash is the universal rich client for delivering effective Macromedia Flash experiences across desktops and devices. Flash lets designers and developers integrate video, text, audio, and graphics into effective experiences that deliver superior results for interactive marketing and presentations, e-learning, and rich Internet applications. Flash is the world's most pervasive software platform, reaching 97% of Internet-enabled desktops worldwide, as well as many popular devices. Uses of Flash animations in business-oriented web sites consist of advertising a product or service, showcasing web design skills, and presenting a corporate image.

As Flash designers, we enhance web sites by using Flash animations and streaming video in innovative ways. We also design Flash and video programs for computer-based training, corporate presentations, Internet advertising, database-driven applications and more.

We design our Flash animations and video so that they engage audiences in compelling ways that get our client's messages across effectively.

Professional Training

Professional Training provides Information Technology and Business Skills training for corporate and public sector clients. We provide expert instructors and excellent course materials to ensure our courses meet the highest standards and focus on exactly what our clients require.

Provide consulting, integration, support, and training services in the following areas:

- Business Training : Managerial skills, Sales Skills, Negotiation Skills, PMP, PGMP ... etc
- IT Training : .Net, SharePoint, MCSE ...etc
- PC Based Information Systems
- Web Site Planning, Design, and Implementation
- Internet Access and E-mail Systems
- Integrated E-mail, Fax, and Group Collaboration System Design, Implementation, and Training
